## Neutralizer 408

**Neutralizer 408** is designed to neutralize residual acid on a workpiece which has been subject to processing using acid pickling or any other acidic treatment. The neutralization process will prevent any post rusting that may occur. Also the run-off water produced in rinsing step is an environmentally neutral PH solution.

### Properties:

- Color and odor Thixotropic liquid with slight odor
- Specific gravity 1.10

### Application:

1. Apply the neutralizing solution as is by brush or sprayer over acid treated areas. A bubbling reaction will occur. Neutralization is complete when bubbling has ceased.
  2. Rinse with water.
- **Neutralizer 408** will cling to vertical surface for required contact time when is sprayed ( Thixotropic ).
