

CHLO-RID

DESCRIPTION

Chlo-Rid is a dry crystal product that has to be diluted with water to activate it. After diluting, pour product over the bleached area to neutralize any trace of chlorine that remains prior to re-dyeing carpet. This product will allow carpet to be re-dyed after it has been bleached by chlorine. May also be used around pools and hot tubs prior to damage to help prevent it from occurring.

Chlo-Rid helps prevent damage to carpet and fabrics from chlorine bleach upon contact. However, fabric must be treated with Chlo-Rid prior to bleach spilling on item or treated before pool chlorine comes into contact with fabric. If treated after the fact, it will not remove the bleach stain but only helps prevent further damage from occurring. Can be used safely in homes, hotels, motels, apartments, laundries, gyms and health spas.

INSTRUCTIONS

Dissolve four to six tablespoons of Chlo-Rid per 1/2 gallon of water. Pour or spray over bleached area. Being careful to totally saturate stained area. Treated area should be rinsed prior to dyeing carpet.

FEATURES

- v High concentration
- v Rinses freely

SPECIFICATIONS

Appearance:	Clear Crystal	pH:	NA
Odor	Bland	Detergency:	None
Specific gravity:	1.15
