

CONCRETE RESTORER

DESCRIPTION

Concrete Restorer is a concentrated blend of mild acids, chelating and wetting agents. It is formulated as a mild to non-etching concrete and masonry cleaner and degreaser. As a result Concrete Restorer can safely be used on architectural smooth finished concrete, textured, exposed aggregate and all types of masonry with equal results.

INSTRUCTIONS

1. Pre-wet the surface with water.
2. Concrete Restorer can be diluted with up to 3 parts of water depending on surface condition (amount of the soil). Always test area (4'x4') to determine dilution ratio and procedure and let it dry completely before your evaluation.
3. Apply by soft bristle masonry brush. Preferably work from the bottom to top to help avoid streaking.
4. Wait 5-15 minutes, in badly soiled surfaces, re-apply a thin coat and agitate the surface by scrubbing for best results.
5. Rinse thoroughly with high pressure.
6. Coverage is 150-250 per gallon of concentrated material. Coverage will vary due to porosity, texture and age of masonry surface to be cleaned.

FEATURES

- Very effective for cleaning dirtiest and most heavily carboned buildings.
- Safer than blasting, will not pit or damage the masonry surface when properly used.

SPECIFICATIONS

Appearance:	Clear Solution	pH (of 1% Dilution):	1.5-2.0
Odor:	Mild Odor	Biodegradability:	yes, all surfactants

SAFETY

Keep out of the reach of children! Wear safety glasses and rubber gloves.
