

## **STAINOFF LIQUID**

### **DESCRIPTION**

Stainoff is a safe to use product for use on fabrics, carpeting, or clothing to instantly remove food grade dye stains. Stainoff can be used for treating carpet and fabric for the presence of cranberry juice, Kool-Aid, fruit punch, shoe polish, cough syrup, latex paint, many wines, chocolate, dirt, grease, and soft drink stains.

### **INSTRUCTIONS**

Check stain for residue from inferior cleaners - if present, rinse completely before starting. Blot dry if necessary. Apply Stainoff directly from bottle to stained area. Allow to soak for a few seconds before starting. Next, lay a moist 100% cotton towel or wash-cloth over stained area. Fill your normal household steam iron with plain tap water. Set iron at lowest heat setting (that will produce steam). Note: Higher does not speed up the process, it slows it down and sets the stain. Set the preheated iron on top of the towel directly over the stained area. Do not apply pressure. Use the weight of the iron only. Allow iron to set on towel until it starts to boil around edges. This usually takes approximately 20-40 seconds. When boiling starts apply pressure to handle of iron and hold firmly on towel for about 10 seconds, then lift iron and towel, check for transfer, shift iron to clean moist area on towel and repeat if necessary.

### **FEATURES**

- First chemical marketed strictly for the removal of Kool-Aid
- Removes popsicle, cough syrup and other food coloring stains
- Works on a heat transfer principal
- Works over 95% of the time, when used correctly
- Also available in a 16oz. pouch which includes a towel

### **SPECIFICATIONS**

Appearance:	Clear	pH:	7.5 - 8.0
Odor:	Slight	Biodegradable:	Yes
Specific gravity:	1.0	Detergency:	Excellent

### **SAFETY**

Keep this and all chemicals out of reach of children!

This product may cause skin and eye irritation to sensitive individuals. If inhaled, steam may be irritating. If inhaled, remove to fresh air. If persistent difficulty in breathing occurs get medical attention. If ingested, drink plenty of water and get medical attention. For skin contact, wash with water. Refer to Material Safety Date Sheet for additional safety information. Nontoxic, non-corrosive, and non-hazardous.
