

TOTAL KILL

DESCRIPTION

This product is designed for use in areas where all vegetation is to be killed. In many areas, the presence of broadleaf and grass weeds, leads not only to an unsightly appearance, but also to a fire hazard, an insect problem, and a health problem. By using a non-selective, residual herbicide, all the vegetation will be killed (non-selective), and control will last for one growing season (residual), avoiding costly weed cuttings and/or several weed killing applications. Some weed killing activity begins, as soon as the material is sprayed, however, rainfall is needed to wash the active ingredient into the root zone before control is completed. Plant growth will then be inhibited for at least one year, except in areas of high rainfall and sandy soils. It is not effective against shrubs or other woody growth, and care should be taken not to spray desirable vegetation or in areas where planting is expected.

INSTRUCTIONS

Outdoors: use as a spray to kill vegetation on non-cropland areas such as railroad sidings, right-of-way, recreational areas, roadways, fencerows, parking lots, drainage ditch-hands, industrial sites, medians, airports, and similar areas. This product kills a wide variety of broadleaf and grass weeds, shallow and deep rooted, annual and perennial, including Canada Thistle, Jimsonweed, Johnson grass, Oat grass, Pig wood Plantain, Quakgrass, Sunflower, Yellow Foxtail, and many more. Read the entire label for complete cautions and directions.

FEATURES

- Effective For Prolonged Period
- Dilutable
- One Makes 10
- Non-Selective

SPECIFICATIONS

Appearance:	Gold to Brown Liquid	pH:	NA
Odor:	Fuel Oil	Biodegradable:	NA
Specific gravity:	.920		

SAFETY

Keep out of the reach of children!
